**Reference: Lytham Festival 2024 Capacity Increase**

Dear Dan,

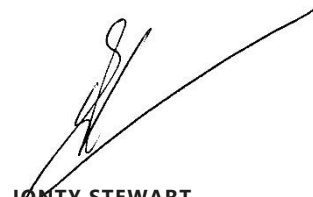

Further to our earlier discussion regarding the proposed increase in capacity to 25,000, I would confirm that the PA system specification used in 2023 (and previously) is sufficient to meet the coverage requirements of the larger crowd without any increase in on-site level, which of course means no attendant off-site increase.

There would be no change required to the way we manage noise from the event in terms of the measurements we take and the control measures we put in place.

I understand why you wish to increase the number of people who can attend the event by up to 5,000, but can assure you that you will not need to change the existing system or increase the onsite levels to be able to accommodate them, and it will not impact on our ability to manage the noise or the methodology we employ to do so.

I trust that this information will be sufficient to your needs, but please don't hesitate to contact me should you have any further queries.

Kind regards,
